

Попробуйте переписать классовый компонент Counter, используя хуки:

```
class Counter extends Component {
  state = {
    count: 0
  };
  handleClick = () => {
    this.setState(({ count }) => ({
      count: count + 1
    }));
  };
  render() {
    return <button onClick={this.handleClick}>{this.state.count}</button>;
  }
}
```

Ответ:

```
import React, { useState } from "react";

function Counter() {
  const [count, setCount] = useState(0);

  const handleClick = () => {
    setCount(count + 1);
  };

  return (
    <button onClick={handleClick}>
      {count}
    </button>
  );
}

export default Counter;
```
